

ABSTRACT

1 For tubing/casing annulus plug treatment to plug a
2 well, a tubing/casing annulus plug additive including a
3 dry mixture of water soluble crosslinkable polymer, a
4 crosslinking agent, and a reinforcing material of fibers
5 and/or comminuted plant materials. The method of forming
6 a tubing/casing annulus plug fluid includes contacting
7 the additive with water or an aqueous solution, with a
8 method of plugging the tubing/casing annulus of a well
9 further including the step of injecting the fluid into
10 the annulus.
